**MOTUS AX**
The new MOTUS AX 755 nm high frequency alex laser system offers totally painless and smokeless hair removal procedures to all types of patients. Utilizing DEKA’s proprietary new Môveô Technology, MOTUS AX provides a high comfort procedure with excellent tolerability. MOTUS AX allows for no stress procedures for users also. The easy and full parameter controls (three levels: Soft, Medium, High) and countdown selectable energy levels give physicians the ability to tailor treatments on all patients and for all skin types.

**Discovery Pico**
Quanta System proudly introduces the brand new Discovery Pico, a next-generation Pico laser. It has an Nd:YAG double-wavelength laser source emitting at both 1064 nm and 532 nm, provided with the exclusive Quanta Pico-Boost Technology (patent pending). This feature enables picosecond mode — delivering up to 800 mJ of energy and up to 1.8 GW of power — and Q-Switch and PhotoThermal modes, thus making Discovery Pico one of the most powerful and flexible lasers in its class.

**Radiesse**
Radiesse® is a state-of-the-art dermal filler consisting of calcium hydroxyapatite microspheres suspended in an aqueous carboxymethylcellulose gel carrier. Its innovative microsphere technology provides a unique mode of action for outstanding lifting and contouring effects with collagen-based volume enhancement, and long-term improvement of skin quality. The excellent rheological properties (high elasticity and viscosity) of Radiesse make it more resistant to external pressure, provide firmer tissue support and help withstand mechanical stress.

**Silhouette Soft**
Silhouette Soft® is a re-absorbable suture with bi-directional cones for redefining the face, reducing wrinkles and repositioning volume with minimal downtime for the patient. This unique 30-minute treatment, performed under local anesthesia, results in an immediate lifting effect and a progressive regeneration of collagen for results lasting up to 18 months. Silhouette Soft is made in the U.S. and is currently distributed in more than 70 countries.

**Multiline**
Multiline™ is a unique laser system with an integrated universal power and control system featuring external, compact laser emitters. Replacing one laser emitter with another alters the profile of the device, taking it to another level and transforming it into a different tool. The original design allows the equipment to maintain stable outcome parameters and offers required durability, resisting external mechanical wear. To simplify its use, Multiline settings are pre-programmable, resulting in excellent clinical outcomes.

**ZLipo**
ZLipo is an innovative Cryolipolysis™ system that makes it possible to target fat deposits and reduce them permanently and non-invasively. This method cools fat deposits over a longer period of time to a controlled and safe temperature range. ZLipo convinces with its simple and safe handling. By combining Cryolipolysis and shockwave, Zimmer offers the perfect combination treatment for significantly better fat reduction. Studies have shown that shockwave after Cryolipolysis ensures improved fat loss, stimulates lymphatic drainage and tightens skin.

---

Aquamid® Reconstruction is a non-absorbable hydrophilic gel consisting of 97.5% water and 2.5% cross-linked polyacrylamide. It is designed for soft tissue augmentation for aesthetic and reconstructive purposes and acts by adding volume to soft tissue. Aquamid gives an immediate, natural look and feel, and integrates completely into subcutaneous tissue. It does not degrade over time, and the aesthetic results will remain for years. The efficacy and safety of Aquamid have been documented in several international clinical studies.

VICTRA H1
VICTRA H1 is a flexible, high quality 3D imaging solution that can be used in any location for a wide-range of purposes. Face Sculptor software provides aesthetic simulation tools for facial contouring, skin rejuvenation, rhinoplasty, chin augmentation and more. Analytic tools enable measurements of volume and contour plus visualization of texture, vascularity and pigmentation. VICTRA H1 software enables automatic stitching of multiple captures into a single, high resolution 3D image.

VECTRA H1
VECTRA H1 is a flexible, high quality 3D imaging solution that can be used in any location for a wide-range of purposes. Face Sculptor software provides aesthetic simulation tools for facial contouring, skin rejuvenation, rhinoplasty, chin augmentation and more. Analytic tools enable measurements of volume and contour plus visualization of texture, vascularity and pigmentation. VECTRA H1 software enables automatic stitching of multiple captures into a single, high resolution 3D image.

Microson Dual
Microson Dual is a High Intensity Focused Ultrasound (HIFU) system for facial lifting by producing focal thermal coagulation points at the superficial musculoaponeurotic system (SMAS), deep dermis and subcutaneous adipose tissue. The Microson Dual is a non-invasive, non-surgical ultrasound lifting system providing facial and body lifting effects without causing superficial damage. It incorporates five cartridge types and features a dual handpiece for convenient treatment.

Med2 Contour Dual
Med2 Contour Dual uses a patented handpiece, which carries two efficient ultrasound heads for specific and controlled emission of low frequency ultrasound at a focused depth inside the subcutaneous tissue. Med2 Contour Dual acts only on adipose tissue, thanks to the special shape of its handpiece and the inclination of the double ultrasound plates, which center their action on the tissue to treat, thus leaving the surrounding structures undamaged. These features allow safe, efficient and customized treatment, with visible results after the first session.

SP Dynamis
This all-in-one, anti-aging laser platform, allows fast, precise and efficient procedures with reduced recovery times. With fully customizable settings, the system offers true third-generation Er:YAG resurfacing. The Nd:YAG wavelength is a gold standard for hair removal, rejuvenation, acne, pigmented and vascular indications. Nd:YAG scanner compatibility further enhances treatment speed, safety and efficacy, especially for large application areas. The SP Dynamis combines popular aesthetic treatments with additional minimally-invasive surgical procedures (laser lipolysis, hyperhidrosis treatment etc.).

ThermiRF
ThermiRF™ is a platform technology that includes the first use of thermistor regulated radiofrequency for micro-invasive aesthetic applications. Tiny injectable RF needle probes may be applied under the skin’s surface for targeted heating of tissue. When combined with external infrared imaging, ThermiRF treatments have been shown to be safe.

MICOOL-A

MICOOL-A is a cryo fat reduction device that uses persistent low temperature to reduce subcutaneous fat without damaging overlying skin. Non-invasive selective Cryolipolysis has been reported as a safe and effective treatment modality for the reduction of excess adipose tissue. Different from necrosis liposuction, MICOOL-A boasts superior cryo fat reduction effects though apoptosis therapy.

BTL Vanquish ME

BTL Vanquish ME™ is a breakthrough in the aesthetic industry, as the first and only non-contact device for fat and circumferential reduction of the abdomen and legs. BTL Vanquish ME does not simply reduce or remove fat from one’s body; rather it eradicates its potential for growth for a prolonged period of time. Relying on patented, non-contact Selective RF™ (radiofrequency) technology to literally melt fat away, BTL Vanquish ME provides the patient unsurpassed comfort. Practitioners highly endorse its operator ease-of-use, effectiveness, the ability to non-invasively treat a large surface area and lack of consumables.

BTL Industries: +1 866 285 1656 or visit www.btlaesthetics.com

Hyabell

The new range of Hyabell® dermal fillers offers a long lasting improvement and a convincing safety profile. The pre-incorporated lidocaine (0.3%) facilitates the injection procedure and reduces pain, thus enhancing patient satisfaction. Hyabell fillers have considerably better visco-elastic properties and softer extrusion forces than other hyaluronic acid dermal fillers available, due to the innovative monophase particle technology (MPT) production process. The optimized physical properties allow better clinical results.

Ulthera

Only delivered by the authentic Ulthera® System, Ultherapy® is a non-surgical procedure that uses micro-focused ultrasound to stimulate the body’s own natural healing process to non-invasively lift and tighten skin. With over 680,000 treatments to date, this first-of-its kind lifting treatment has received the CE Mark for lifting and sculpting of the dermis of the upper and lower face, neck and décolleté. For indications in your country and full product and safety information, including possible mild side effects, refer to the Ulthera System Instructions for Use.

Ulthera, Inc., a division of Merz, Inc.: +1 480 619 4069 or visit www.global.ultherapy.com
sonoQueen

sonoQueen™ delivers micro-focused ultrasound and makes thermal coagulation points (TCPs) to dermal and SMAS layers in a non-invasive way using High Intensity Focused Ultrasound (HIFU) technology for face lifting, skin tightening and body shaping. Unlike other HIFU systems, sonoQueen has long lasting and cost-effective consumables, and it provides immediate and predictable results with a painless treatment using a high purity transducer.

Nordlys

Nordlys combines Selective Waveband Technology® with a powerful short pulse to rival pulse dye lasers. Vascular applicators are available in two sizes to allow for easier treatment of individual lesions. The Nd:YAG has built-in SoftCool™ cooling resulting in almost painless vascular treatments. A new 1550 nm non-ablative fractional laser enables skin resurfacing and treatment of acne scars, surgical scars and striae, all using a silent ergonomic console.

PicoSure 755 / 532 / Focus Platform

PicoSure® is the only 755 nm / 532 nm laser for novel aesthetic skin treatments and tattoo removal of all colors. PicoSure Focus™ for skin rejuvenation, pigmented lesions, acne scars, wrinkles, melasma management and PicoToning™, provides dramatic results without the typical downtime or discomfort. PicoSure is the world’s first picosecond aesthetic laser platform widely recognized for its technology leadership, unmatched clinical versatility and proven performance. PicoSure has enabled clinical applications not available with any other laser.

ELLANSÉ

ELLANSÉ™ is a polycaprolactone based collagen stimulator range available in four different longevity options (S, M, L and E) for facial treatments ranging from 12 months to 4 years. This family of products provides safe and cost-effective treatments through Sustained Performance, Tunable Longevity and Total Biodegradability (STAT Technology™). ELLANSÉ combines immediate effects with long lasting volumization through stimulation of natural neocollagenesis. Physicians can choose the appropriate product based on the desired longevity and treatment area.

CoolSculpting

CoolSculpting® by ZELTIQ Aesthetics is the number one most requested, non-surgical body sculpting procedure. The groundbreaking CoolSculpting technology uses a patented cooling process to target and eliminate fat cells, without downtime, anesthesia, or pain medication during treatment. Millions of CoolSculpting treatments have been performed worldwide.

Accent Prime

Accent Prime is Alma Lasers’ most advanced workstation for skin tightening, body contouring and aesthetic enhancement, featuring the innovative UltraSpeed applicator: a pioneering handpiece, which combines a new type of ultrasound technology with an extra-large applicator plate for high speed body contouring. The new UltraSpeed applicator offers a large coverage rate for optimal results; available exclusively with the Accent Prime platform.

PRODUCT PROFILES

PicoWay
PicoWay – now with Resolve – is a dual wavelength (532 nm and 1064 nm) picosecond system with both non-fractional and fractional capabilities, treating a wide-range of pigmented lesions and tattoos. PicoWay’s unique mode of action is based on delivering ultrashort picosecond pulses of energy to the tissue. These bursts of energy create a photoacoustic impact, which breaks up the pigmentation into smaller, more easily eliminated particles.

Syneron and Candela: +34 916 56 8563 or visit www.syneron-candela.es

BTL Exilis Elite
BTL Exilis Elite™ is a technological breakthrough based on Impedance Intelligence technology. Exilis Elite’s Energy Flow Control system includes a built-in thermometer and tissue contact monitoring that automatically regulates the heating power; therefore, therapy is faster and more powerful. Exilis Elite’s novel, scientifically proven technology provides excellent results for body shaping, skin tightening and facial indications. Treatment is painless and does not require any disposables.

BTL Industries: +1 866 285 1656 or visit www.btl-aesthetics.com

Lifting Threads
Croma-Pharma offers two brands of lifting threads: LFL PDO from Grand Aespio and HAPPY LIFT from Promoitalia. Known for safety and biocompatibility, PDO absorbable threads speed up the process of neocollagenesis. As well, the subsequent stimulation of fibroblasts results in further synthesis of elastin. PDO can achieve the following outcomes: elimination of fine wrinkles; smoothing of deep wrinkles; improvement of skin tone, elasticity and texture; and prevention of tissue sagging, with very short downtimes and no visible scars.

Croma-Pharma GmbH: +43 2262 684 68 0 or visit www.princess-lift.com

Idebenone
Idebenone is one of the most antioxidant rich and powerful ingredients in the market for reduction in the appearance of fine lines and hyperpigmentation, and an increase in cutaneous hydration, improving skin firmness and elasticity. Natural elasticity is restored for enhanced luminosity, firmness and smoothness. As well, depigmentation action occurs due to the inhibition of melanin synthesis as a result of tyrosine blocking. Use with various anti-aging and moisturizing products is recommended to strengthen the overall effects.

ZWave Pro
Zimmer MedizinSysteme launched a new system for cellulite treatment with radial shockwave – ZWave Pro. Treatment of cellulite with acoustic radial wave therapy is performed with the transmission of mechanical pressure waves into the tissue. With the new ZWave Pro treatment unit it is possible to perform an effective treatment of connective tissue weakness, stretch marks and cellulite. New expanded application menu enables better and faster skin tightening and body contouring results when combined with ultrasound, soft laser, radiofrequency and cryolipolysis.

SmartXide² DOT/RF
The new SmartXide² DOT/RF system offers unsurpassed flexibility and control. Utilizing DEKA’s proprietary Pulse Shape Technology (PST™), a complete array of pulses are selectable upon necessity. Stack technology, plug and play accessories and computer-based protocols complete this state-of-the-art platform. SmartXide² DOT/RF provides less downtime, less intraoperative and post-op pain, and excellent skin tightening with a bi-polar RF scanner, as well as vulvovaginal reshaping.

DEKA: +39 055 88 74 942 or visit www.dekalaser.com
PROFHILO
Five minute bioremodeling treatment with PROFHILO® is a new, innovative and patented technology, offering 64 mg of stable hybrid complexes of high and low molecular weight hyaluronic acid in a 2 mL syringe for the first time. When implemented using the five injection point BAP Technique, PROFHILO solves the complex problem of skin laxity, quickly, easily and safely with absolutely no downtime for the patient.

miraDry
The miraDry system is the first FDA cleared, non-invasive procedure for permanent reduction of underarm sweat. miraDry is also FDA cleared for permanent reduction of underarm hair of all colors. The miraDry system uses miraWave® Technology — precisely delivered microwave energy, combined with hydroceramic cooling to destroy sweat and odor glands, as well as hair follicles, while protecting the epidermis, upper dermis and sensitive underlying structures. Most patients see results in as little as one fast, safe treatment. miraDry provides one of the highest patient satisfaction ratings of all non-surgical aesthetic procedures.

Miramar Labs: +1 855 647 2379 or visit www.MiramarLabs.com

Perfectha Subskin
Perfectha® SubSkin is a hyaluronic acid based filler of non-animal origin, obtained through a state-of-the-art manufacturing process. Injected in the subcutaneous dermis, Perfectha is recommended to remodel the volume of the jaw, chin and cheek bones, as well as hand rejuvenation. For better application and enhancement of results, Perfectha SubSkin is packaged with one 3 mL syringe or three 1 mL syringes and includes a cannula for more comfort during the procedure.
